

Toronto Library Program Partnership Dashboard

Data Analyst Project Document

Project ID	DA-08
Project	Toronto Library Program Partnership Dashboard
Team setup	Solo or Duo
Skill level	Beginner to Intermediate
Primary U+ program alignment	Volunteer networking, youth/senior workshops, partner outreach
Assigned role	Data Analyst Volunteer - Toronto Library Program Partnership Dashboard
Tools	Excel, Google Sheets, Power BI, Looker Studio
Estimated effort	8-12 volunteer hours
Suggested completion	1.5 weeks

Purpose of This Assignment

Find library branches and program categories that may align with U+ public speaking workshops, senior digital literacy, volunteer fairs, or youth leadership programming.

Background and U+ Context

Libraries are natural community hubs for learning, speaking, youth development, and senior programming. This project turns library branch and program data into a partnership dashboard.

Main Goal

Build a dashboard that identifies branches with strong program activity, relevant audiences, and possible U+ partnership opportunities.

Dataset Package

Use the official dataset source(s) below for this project. Keep the raw downloaded file unchanged in the final workbook, record the download date, and document any filters or cleaning choices.

Dataset / Source	Link
Toronto Public Library branch datasets	https://data.urbandatacentre.ca/en/organization/city-of-toronto-open-data?_res_format_limit=0&_tags_limit=0&tags=tpl
Library branch programs and events feed	https://open.toronto.ca/dataset/library-branch-programs-and-events-feed/
Library card registrations	https://open.toronto.ca/dataset/library-card-registrations

Dataset access instructions: download the current CSV, XLSX, or JSON file from the official source page. Keep a Raw_Data sheet unchanged and document download date, resource name, and any filters used.

Required Tasks

- Download branch data, visits/card registration data if available, and programs/events feed.
- Clean branch names, addresses, neighbourhoods, event categories, audience labels, and dates.

- Classify events into themes: youth, seniors, technology, literacy, career, civic/community, arts, and other.
- Rank branches by alignment with U+ programming and create a partnership notes column.
- Produce a short list of suggested outreach branches with reasoning.

Required Deliverables

Deliverable	What to include	Success standard
Library partnership workbook	Clean tables, event classifications, and branch ranking.	Clear, organized, reproducible, and useful for a non-technical U+ manager.
Dashboard	Branch activity, program themes, and U+ opportunity fit.	Clear, organized, reproducible, and useful for a non-technical U+ manager.
Outreach shortlist	Top 15 branches and suggested workshop angle.	Clear, organized, reproducible, and useful for a non-technical U+ manager.

Suggested File Structure

- Raw_Data: unchanged source data.
- Data_Dictionary: field names, definitions, source, and cleaning notes.
- Cleaned_Data: cleaned table ready for analysis.
- QA_Checks: duplicates, missing values, weird values, suppression/rounding notes, merge issues, and assumptions.
- Analysis_or_Dashboard: pivot tables, charts, maps, or dashboard pages.
- Insights_and_Recommendations: plain-language findings linked to U+ decisions.

Suggested Timeline

Stage	Focus	Expected progress
Kickoff	Review the U+ context, download datasets, preserve raw files, and confirm the project question.	Complete within the 1.5 weeks project window. Share blockers early.
Cleaning	Clean fields, document assumptions, create a data dictionary, and resolve duplicates/missing values.	Complete within the 1.5 weeks project window. Share blockers early.
Analysis Build	Create pivots, metrics, dashboard pages, maps, or classification tables.	Complete within the 1.5 weeks project window. Share blockers early.
Insights	Write recommendations that connect directly to U+ programs and explain limitations clearly.	Complete within the 1.5 weeks project window. Share blockers early.
Final Submission	Submit files with clear names, screenshots where useful, and a short methodology note.	Complete within the 1.5 weeks project window. Share blockers early.

Analysis Questions to Answer

- Which library program themes overlap with U+ programming?
- Which branches show youth or senior programming opportunities?
- What workshop pitch would make sense for each top branch?

Base Requirements and Optional Extension

- Beginner-friendly path: Classify events manually in Sheets and create basic pivot charts.
- Advanced extension: Use keyword tagging formulas or Python text classification for event descriptions.

Quality Expectations

- Keep raw data unchanged and clearly separate raw, cleaned, and analysis tabs.
- Use clear chart titles that state the point of the chart, not just the variable names.
- Document all assumptions, filters, estimates, and manual classifications.
- Avoid overstating findings. Public datasets may be rounded, suppressed, incomplete, delayed, or only indirect proxies for need.
- Write insights in plain language for staff who may not have a technical background.
- Make the final file easy for another volunteer to open, understand, and continue.

Final Submission Checklist

- Raw data preserved.
- Cleaned data included.
- Data dictionary completed.
- QA checks completed.
- Dashboard/charts or analysis tables included.
- Recommendations connected to evidence.
- Limitations clearly explained.
- Files named clearly with project ID and volunteer name.

Final File Naming

- Submit final files using this format: DA-08_YourName_ProjectFile.xlsx and DA-08_YourName_InsightMemo.docx or .pdf.
